

# UNIFYING IDENTITY VERIFICATION AND PASSWORDLESS ACCESS INTO A SINGLE PLATFORM ESTABLISHES COMPLETE, ZERO-TRUST SECURITY

One platform.  
Zero passwords.  
Complete trust.

Identity verification that  
cuts reset costs and  
secures onboarding.

# 1Kosmos: The Gold Standard in Passwordless Identity Verification

A unified identity platform that replaces traditional passwords with government-grade biometric verification. It secures the entire user lifecycle—from onboarding to daily access—using a decentralized architecture that prioritizes user privacy and global compliance.

## MARKET LEADERSHIP & PROVEN SCALE

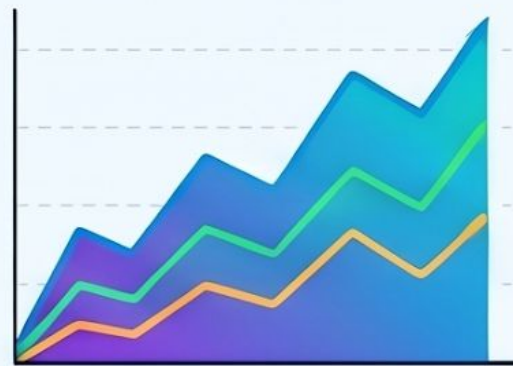

### #1 Ranked for Workforce IDV

Gartner ranked 1Kosmos highest for workforce use cases in the 2025 Critical Capabilities report.

### DoD IL4 Authorized

Authorized to secure United States military identities and sensitive mission access.

### 10M+ Weekly Authentications

Currently processing massive scale for 450,000+ users at enterprises like Concentrix.

## THE SECURE IDENTITY JOURNEY

### Biometric Onboarding

Verifies the identity of any new hire or customer through secure biometric capture.

### Passwordless Authentication

Provides seamless access across all systems using decentralized credentials.

### Risk-Based Reverification

Triggers automatic identity checks whenever the system detects a change in risk levels.

## Privacy-First: Differentiating 1Kosmos from Traditional Providers

### PRIVACY-FIRST ARCHITECTURE

### Zero PII Monetization

User data is never sold, shared, or repurposed.

### Decentralized Storage

Eliminates breach risk by removing centralized databases of personal info.

### Global Compliance

Native support for GDPR and regional data residency requirements.

# Independent analysts definitively rank 1Kosmos as the ultimate leader in enterprise identity architecture.

Leadership Compass for Enterprise Passwordless Authentication

**Overall**

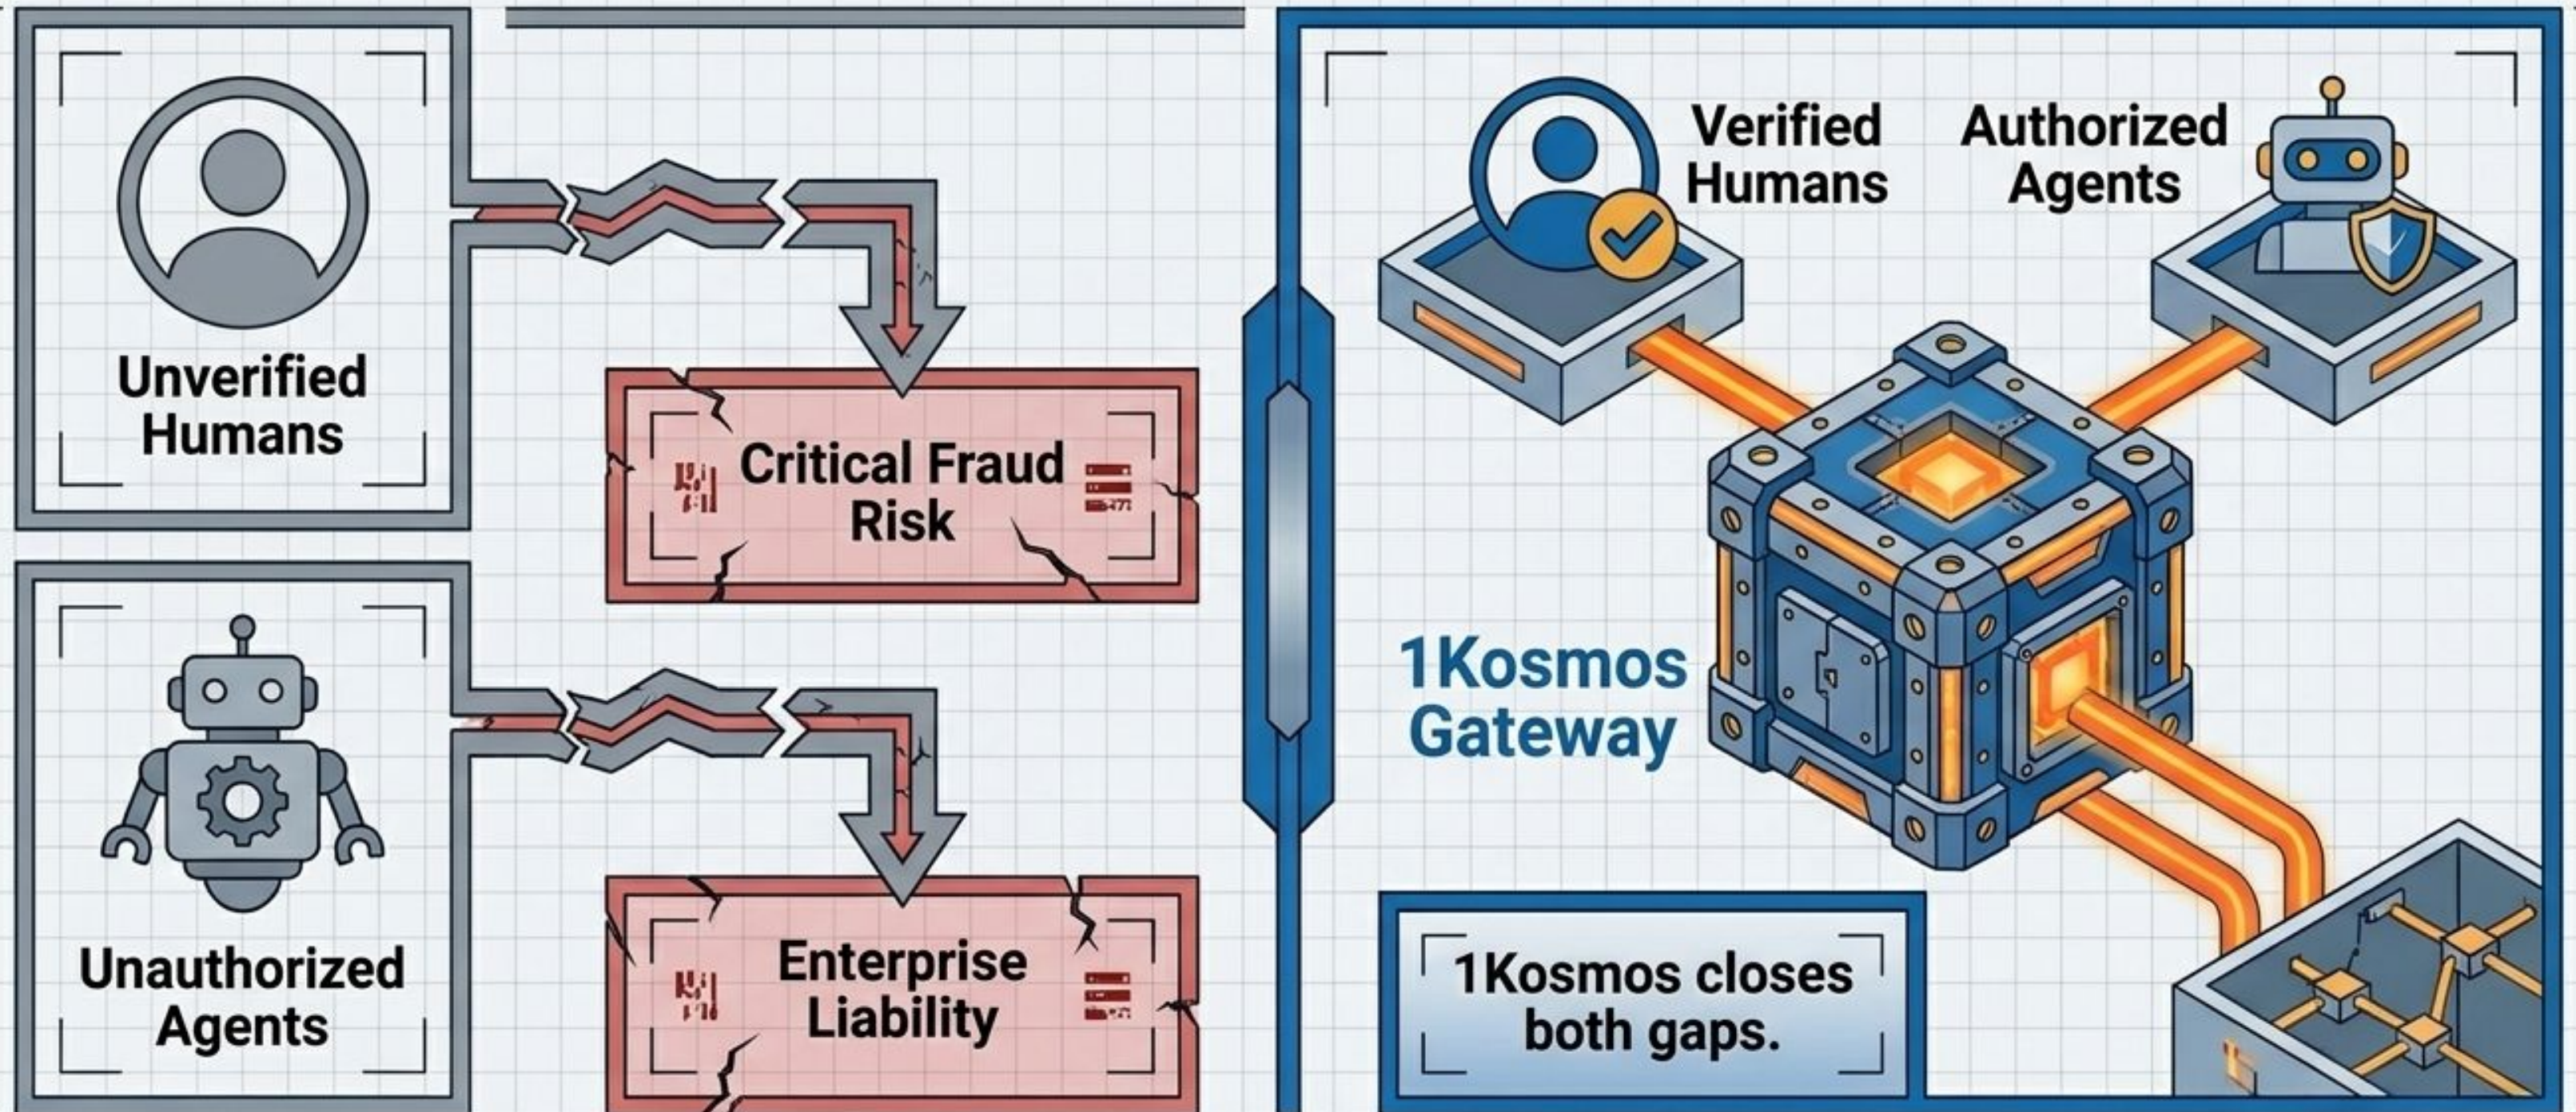

**Product**

**Innovation**

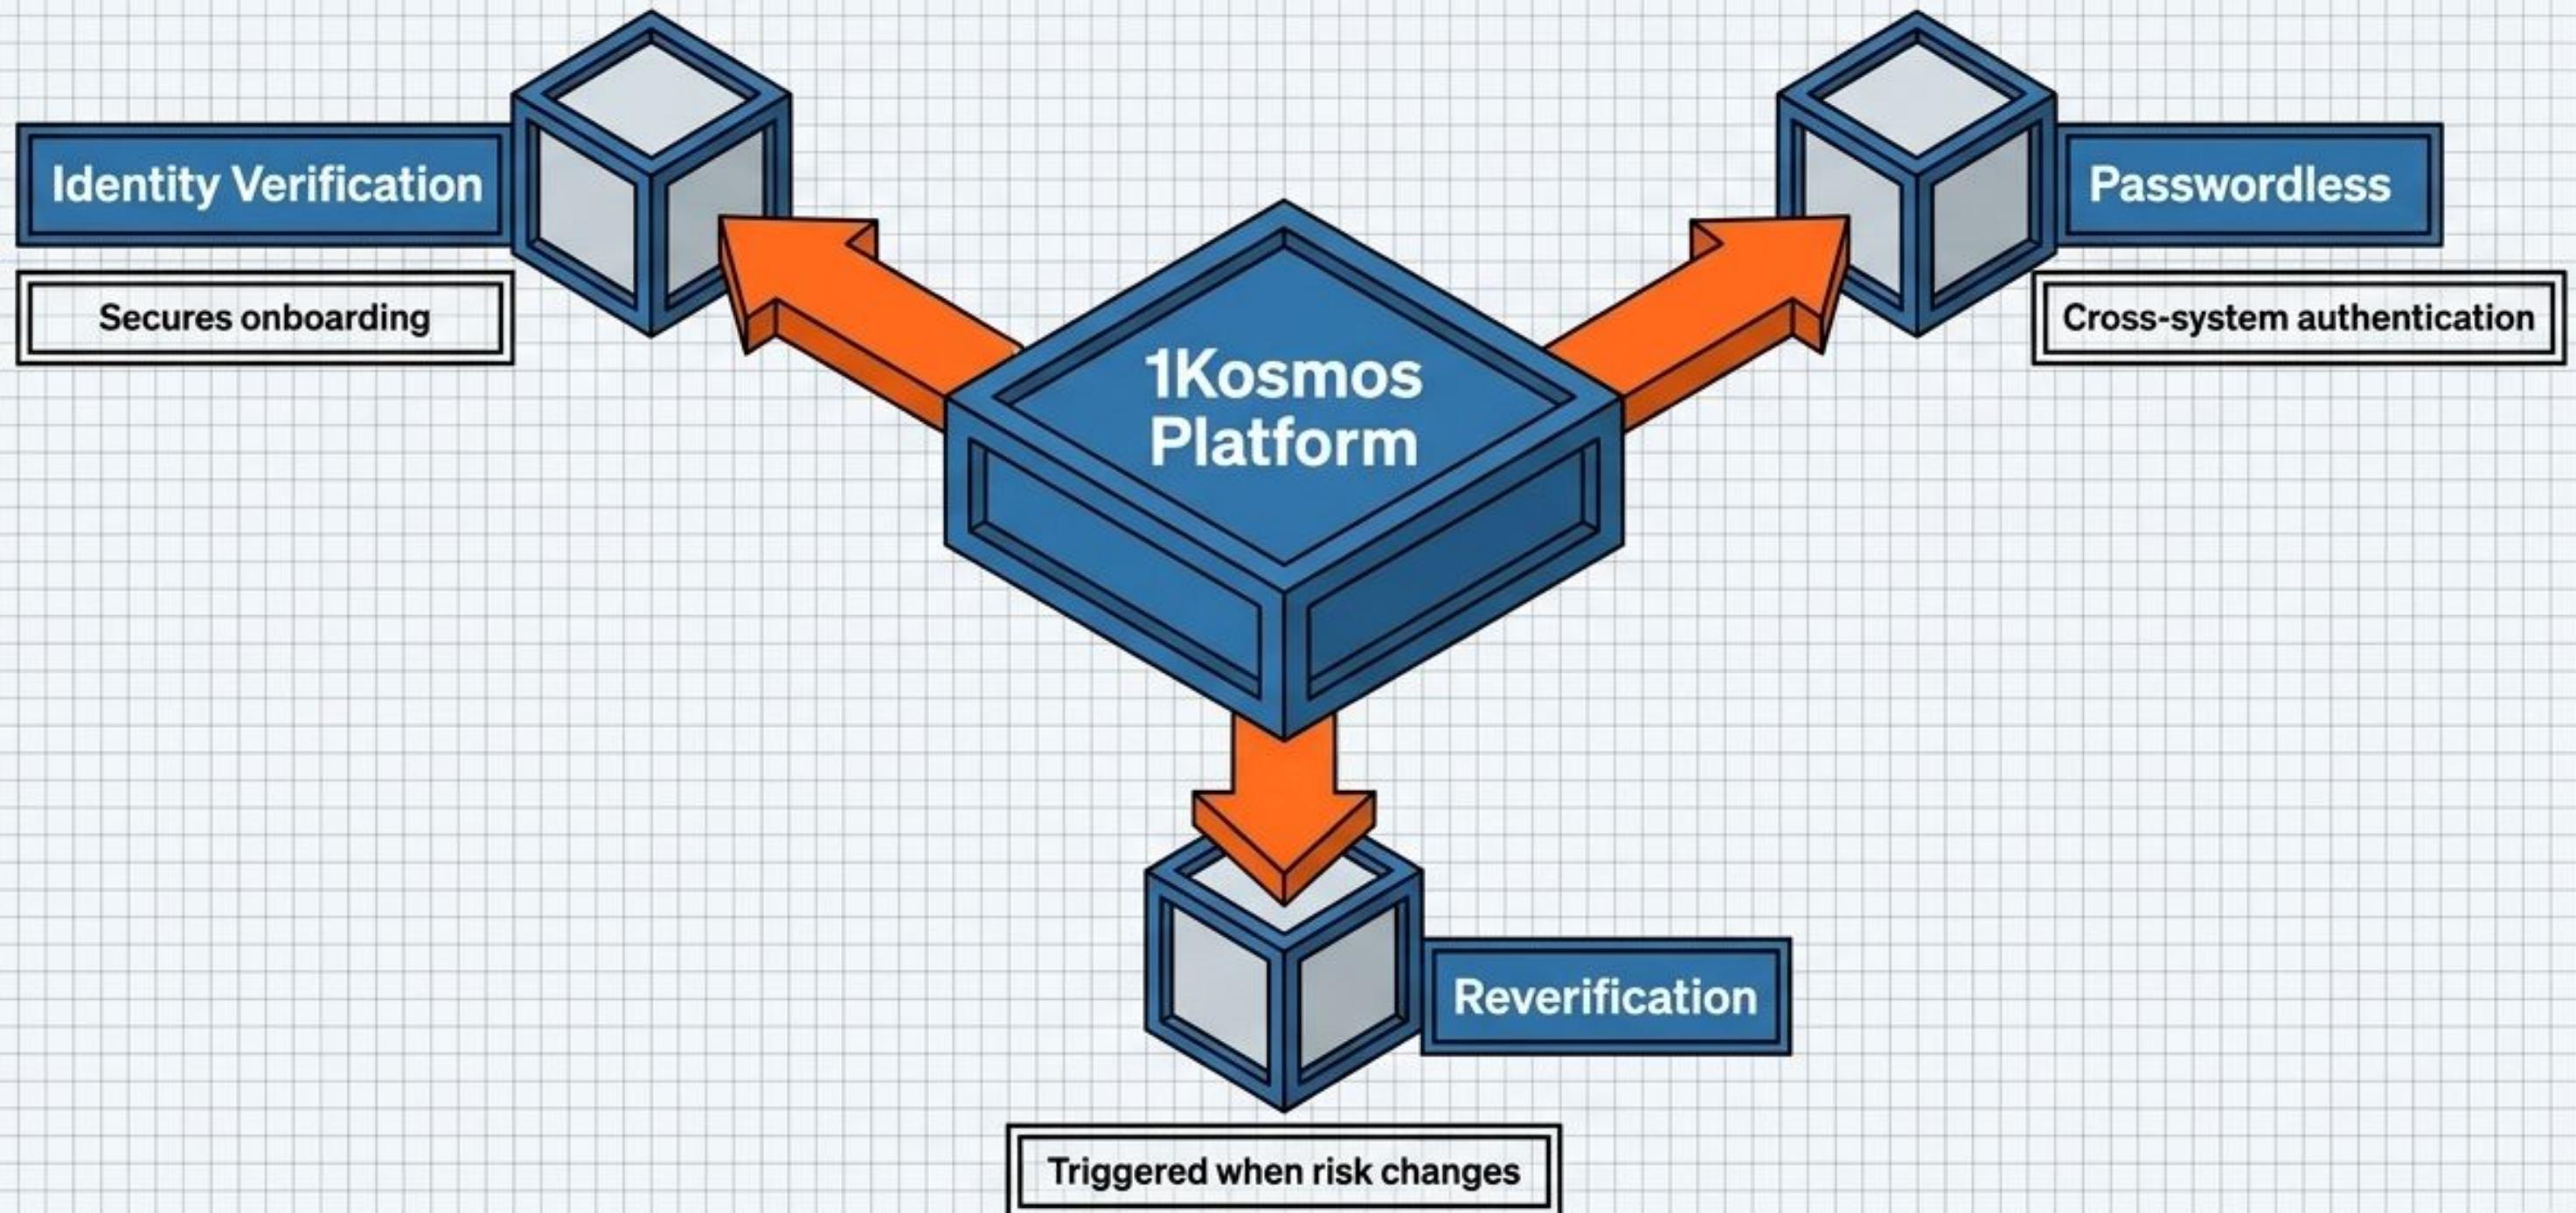

# Unverified human identities and unauthorized agents expose the enterprise infrastructure to critical fraud and liability risks.

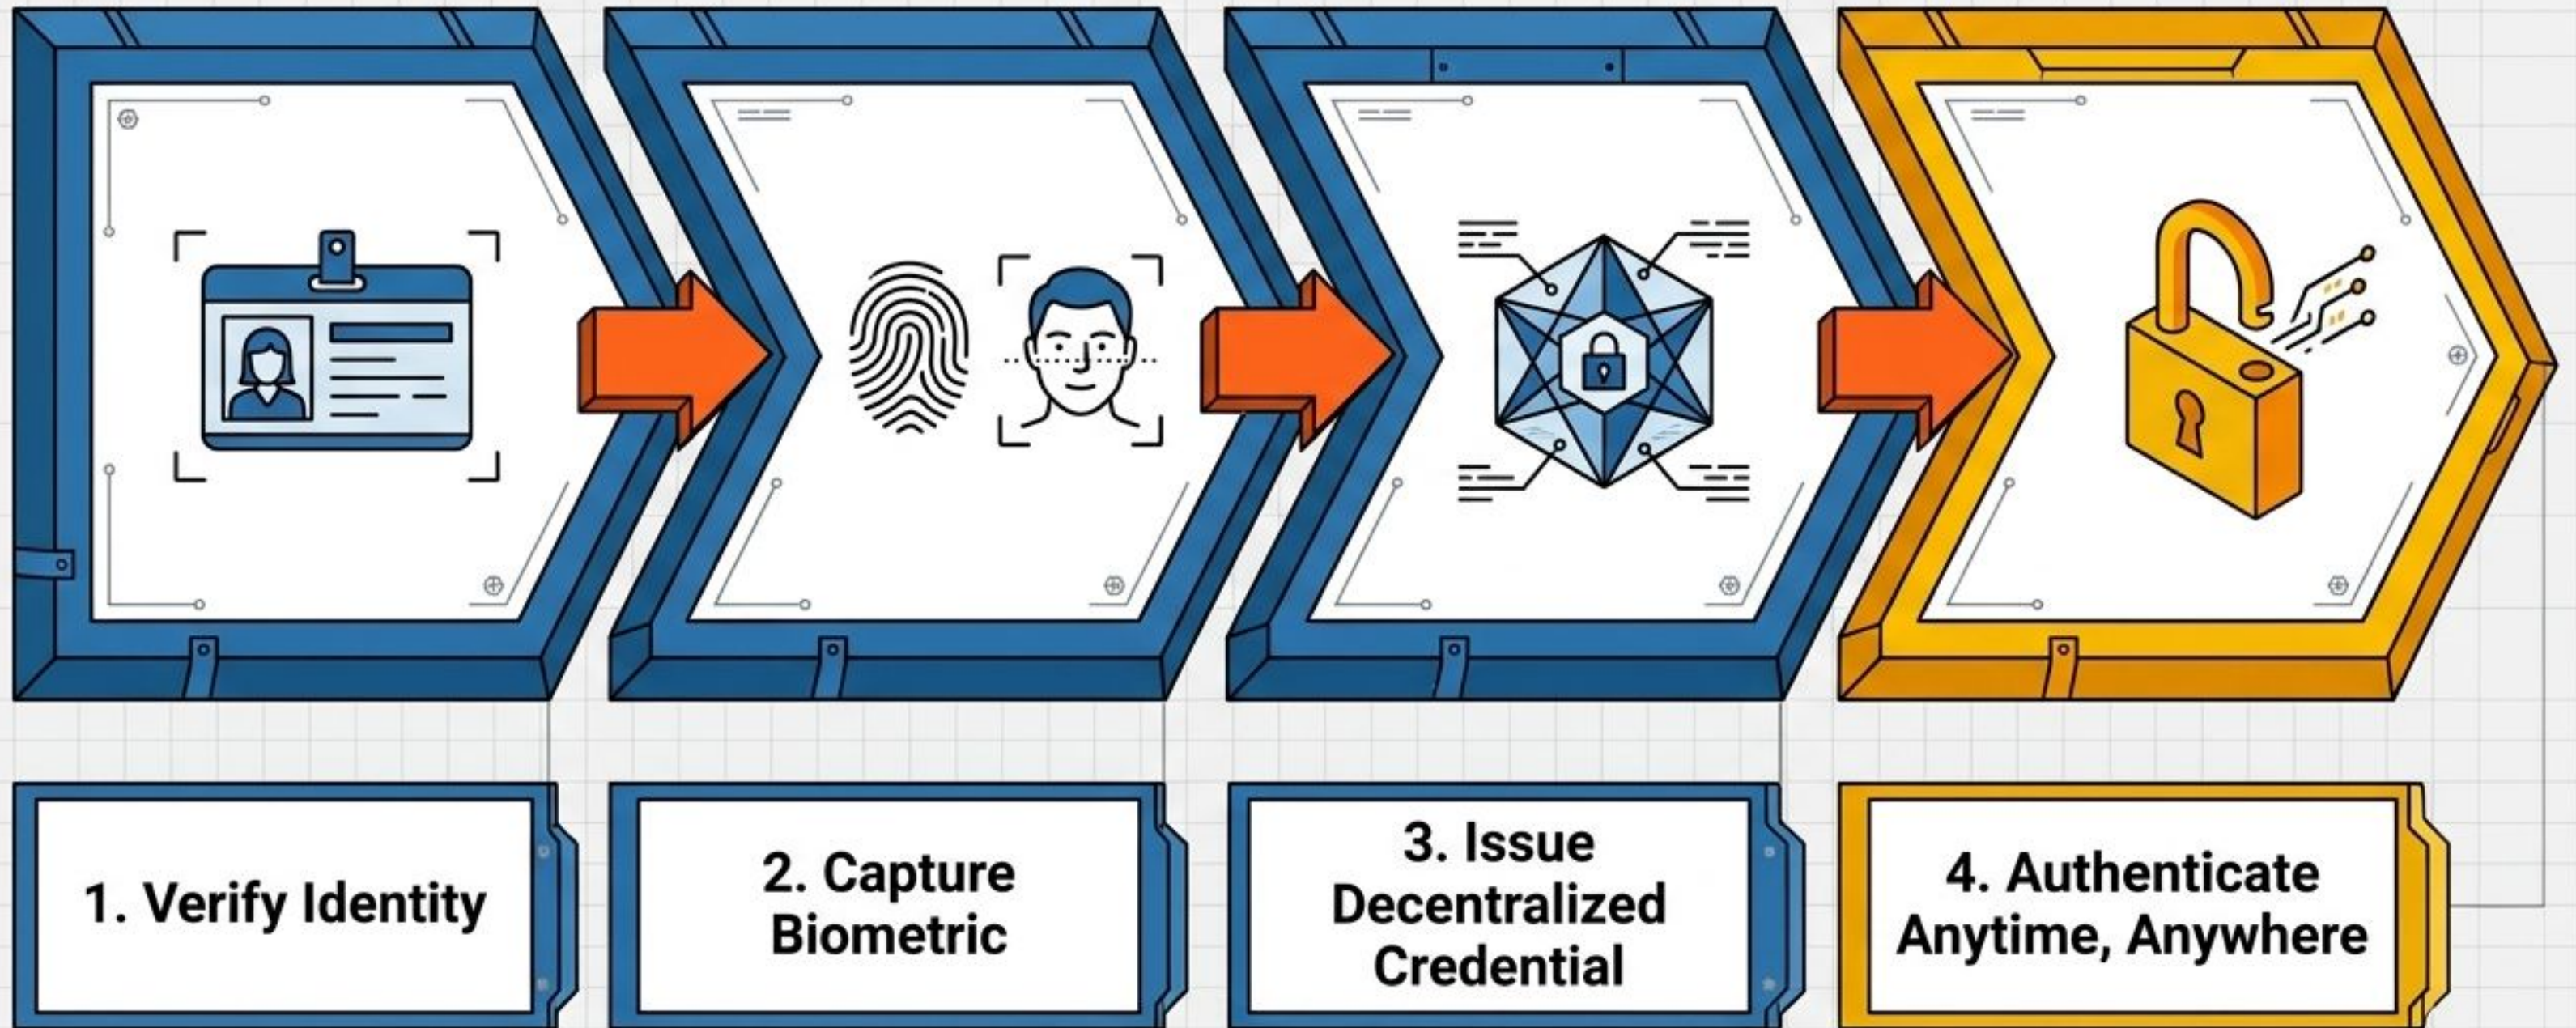

# Continuous lifecycle management guarantees absolute certainty of user identity across every systemic interaction.

Know the identity of any user, across any interaction. All on one platform with government-grade security.

**Seamlessly transforming anonymous users into verified, passwordless entities requires a strict, four-stage protocol.**

**Decentralized architecture** entirely eliminates centralized breach risks while natively enforcing global privacy compliance.

**Core Principle:** Your users' identity data stays with them. We verify without storing, monetizing, or exposing any personal information.

### No PII monetization

We never sell, share, or repurpose user data.

### No centralized storage

Decentralized architecture eliminates breach risk.

### User-controlled credentials

Reusable identities without exposing personal data.

### Built for global privacy

Native GDPR, data residency, and compliance support.

# Government-grade security protocols process immense global authentication loads without systemic degradation

**A single foundational API seamlessly adapts to secure workforce, consumer, and citizen identities.**

**One platform for any identity**

**Workforce Identity**

Verify new hires and support phoneless frontline workers.

**Customer Identity**

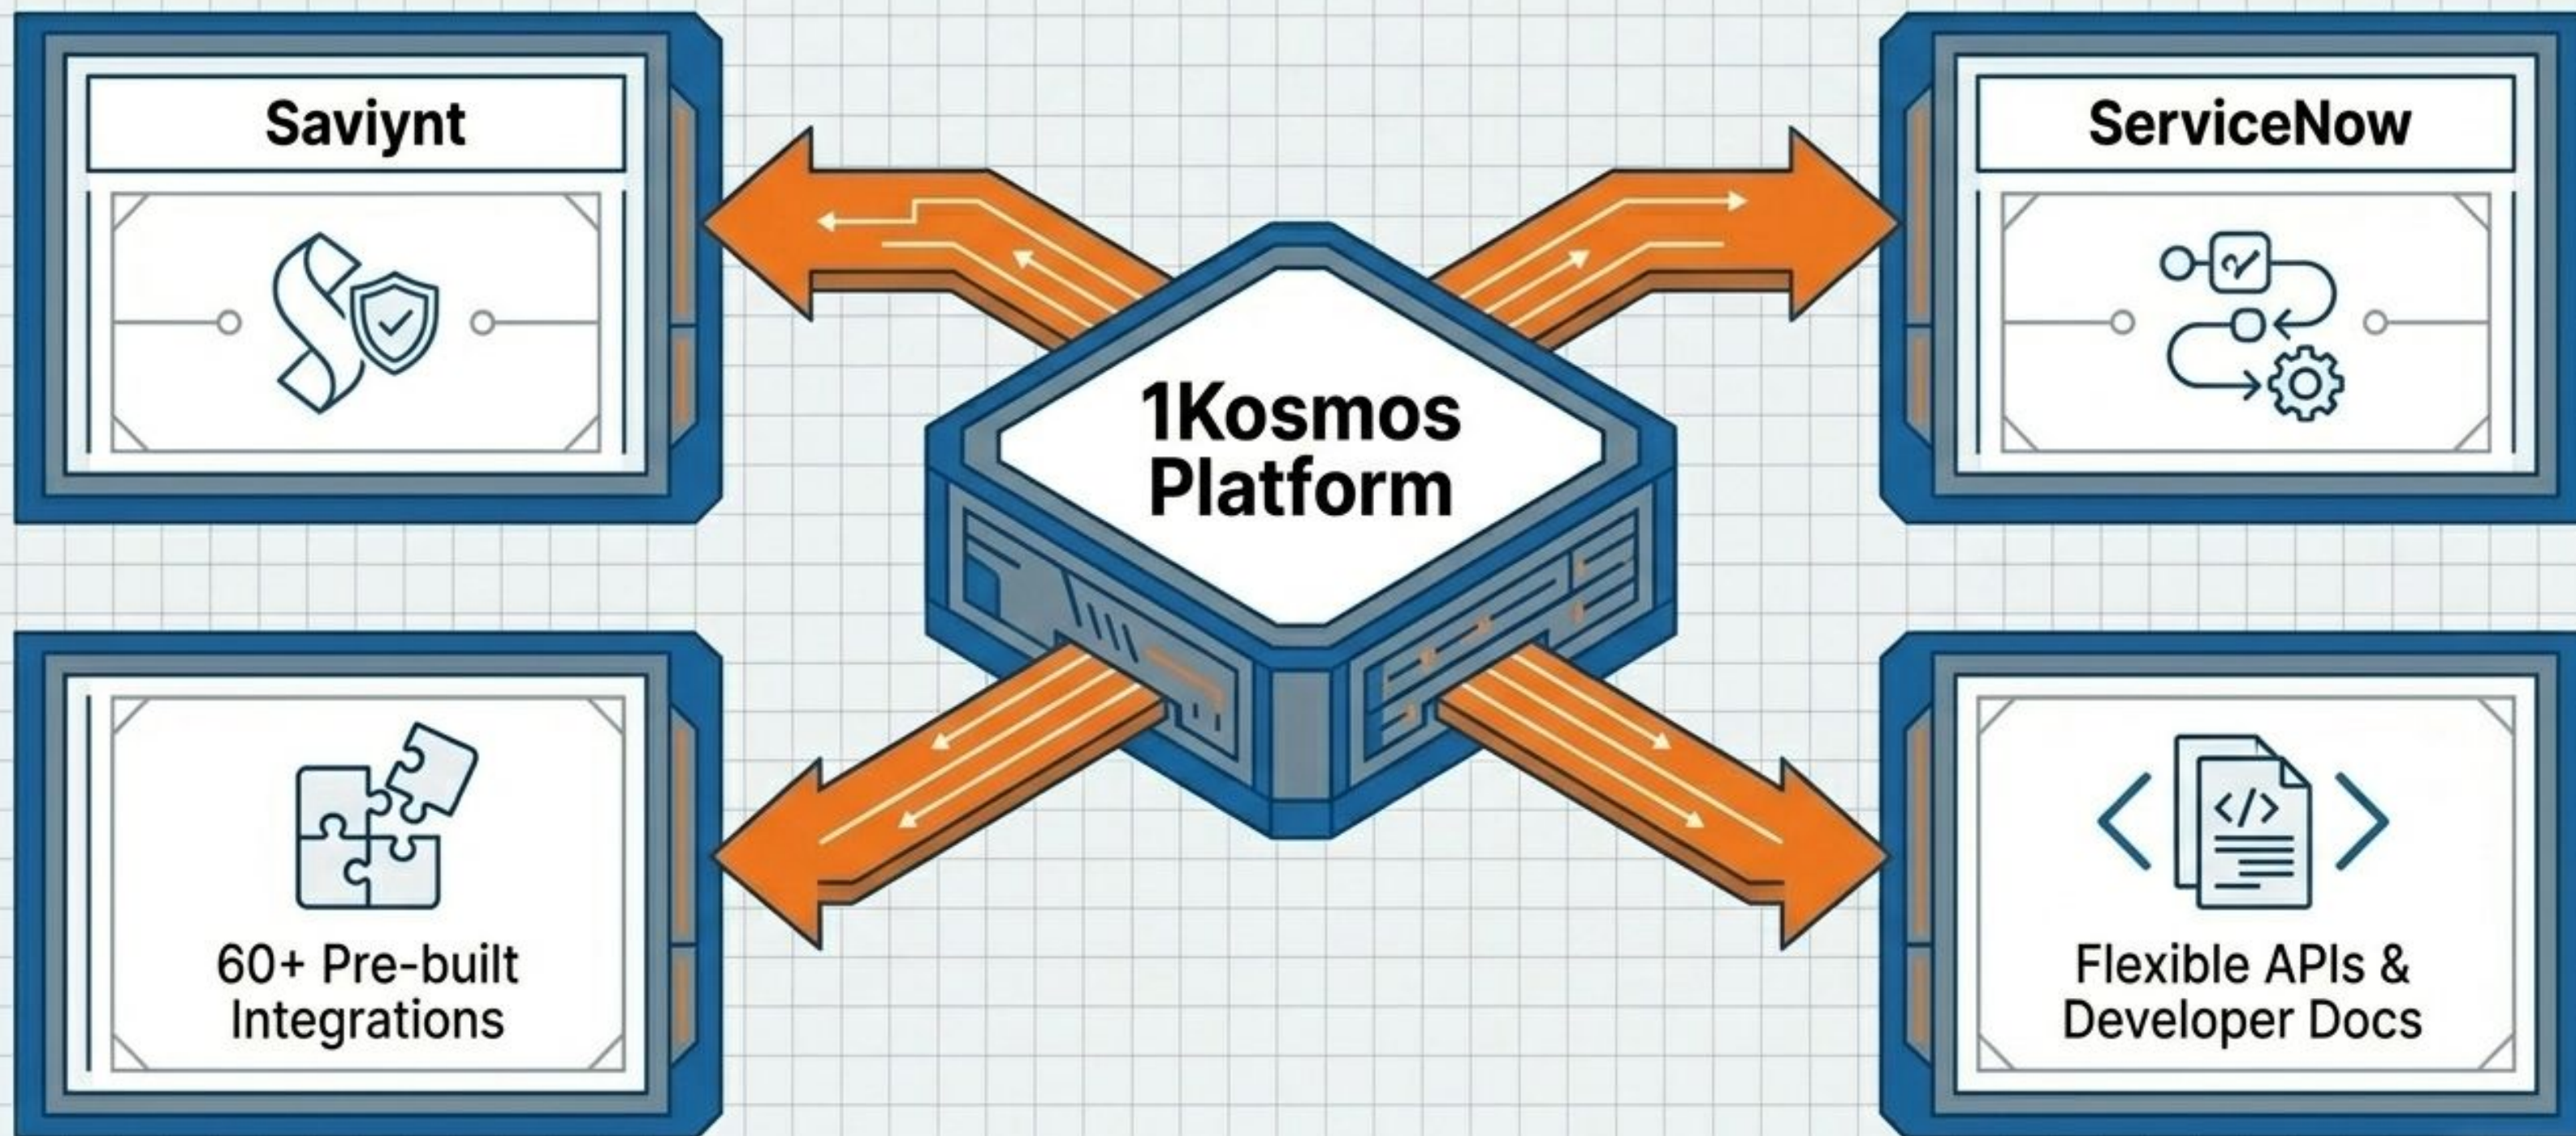

Secure consumer onboarding and access.

**Citizen Identity**

Give residents secure access to government services.

**Pre-built integrations and flexible APIs embed identity verification into existing operational systems in days, not months.**

**Modernizing your enterprise identity verification architecture begins with a structured technical demonstration.**
